- Date : 7th Feb 2024

Business Understanding

- Lending Club is a consumer finance company.
- company receives multiple loan application.
- the company has to make a **decision** for loan approval based on the applicant's profile.
- Two **types of risks** are associated with the bank's decision:
 - ✓ If the applicant is **likely to repay the loan**, then not approving the loan results in a **loss of business** to the company
 - ✓ If the applicant is **not likely to repay the loan**, i.e. he/she is likely to default, then approving the loan may lead to a **financial loss** for the company

Problem Statement

- Lending Club is the largest available loan marketplace for different sorts of loans.
- Minimize the risk of lending money by using EDA technique to find out driving factors for an applicant/borrower which can default and create loss of finance.

Univariate Analysis

Home ownership vs Frequency

Observation :

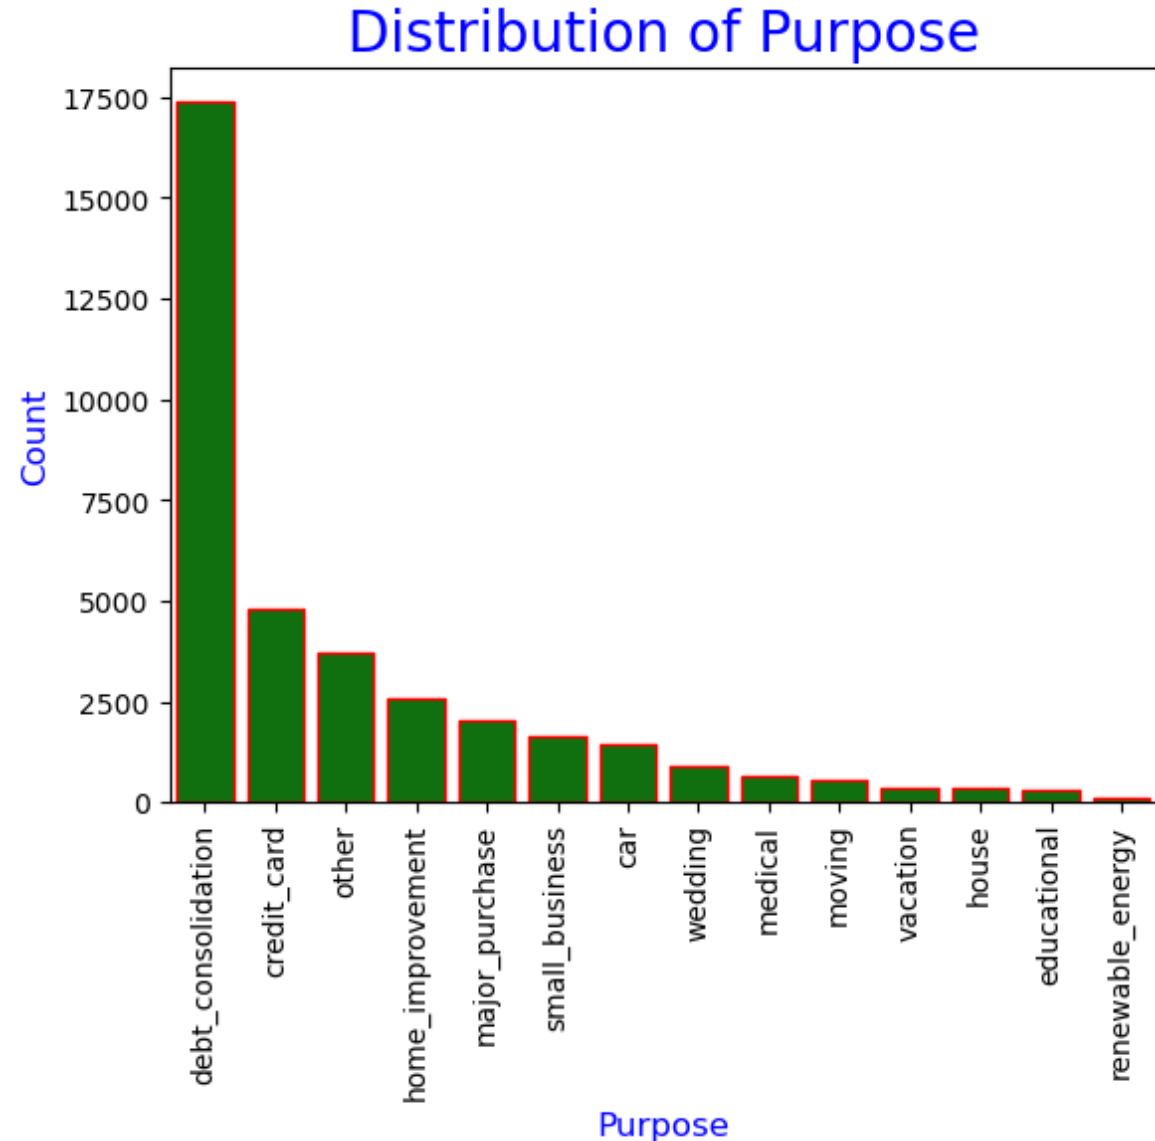

- Most of the customer (close to 92%) are either on rent or having mortgaged home.
- Very less applicant have their own home.

Purpose of Loan vs Frequency

Observation :

- Almost half of the applicants have applied loan with purpose of debt consolidation.
- Around 13 % of the applicants have applied for loan with purpose of paying credit card bills.
- Conclusion is that more than 60% of the applicants/customers have applied for loan with purpose of paying some other existing debt or credit bills.

Verification Status vs Frequency

Observation :

- Every 2 out of 5 applicant's verification is not completed which is very alarming in the *lending business*.

Term vs Frequency

Observation:

- 3 out 4 applicants go for 3 year loan term i.e., low tenure

Grade vs Frequency

Observation:

- 3 out of 4 applicants belong to grade A, B & C.
- Highest applicant count belongs to applicant B.
- Lowest applicant belongs to G.

Assumption:

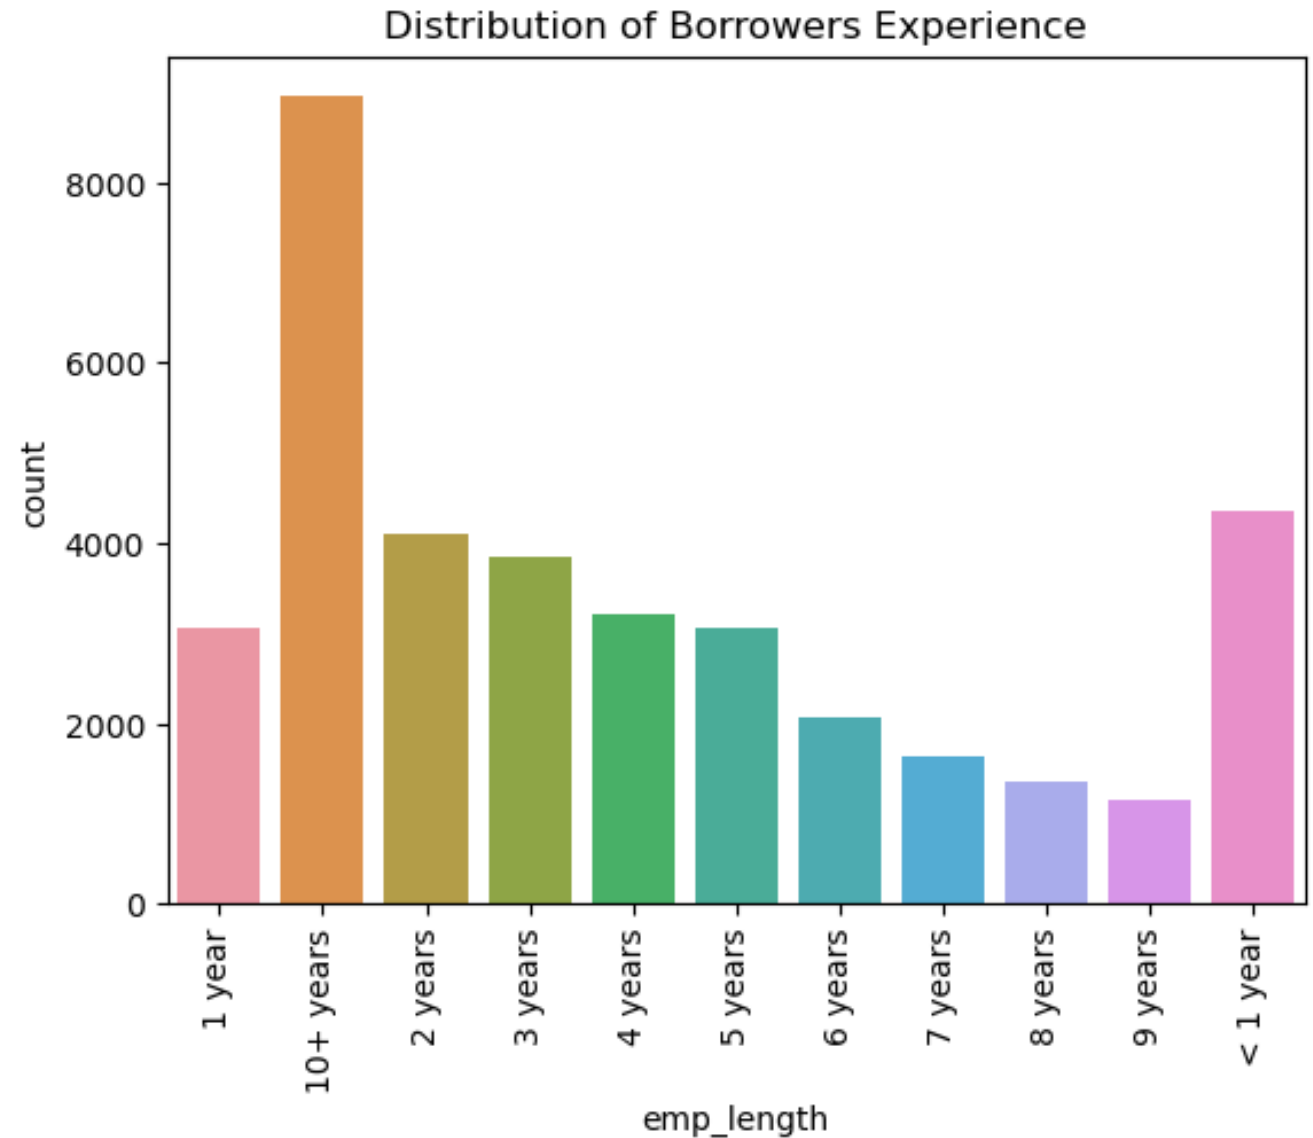

Assumption is A is higher grade and G is lower grade

Borrowers Work Experience vs Frequency

Observation:

- 25% of customers are having 10+ years of experience.
- 33% of customers are having less than or equal to 3 years of experience.

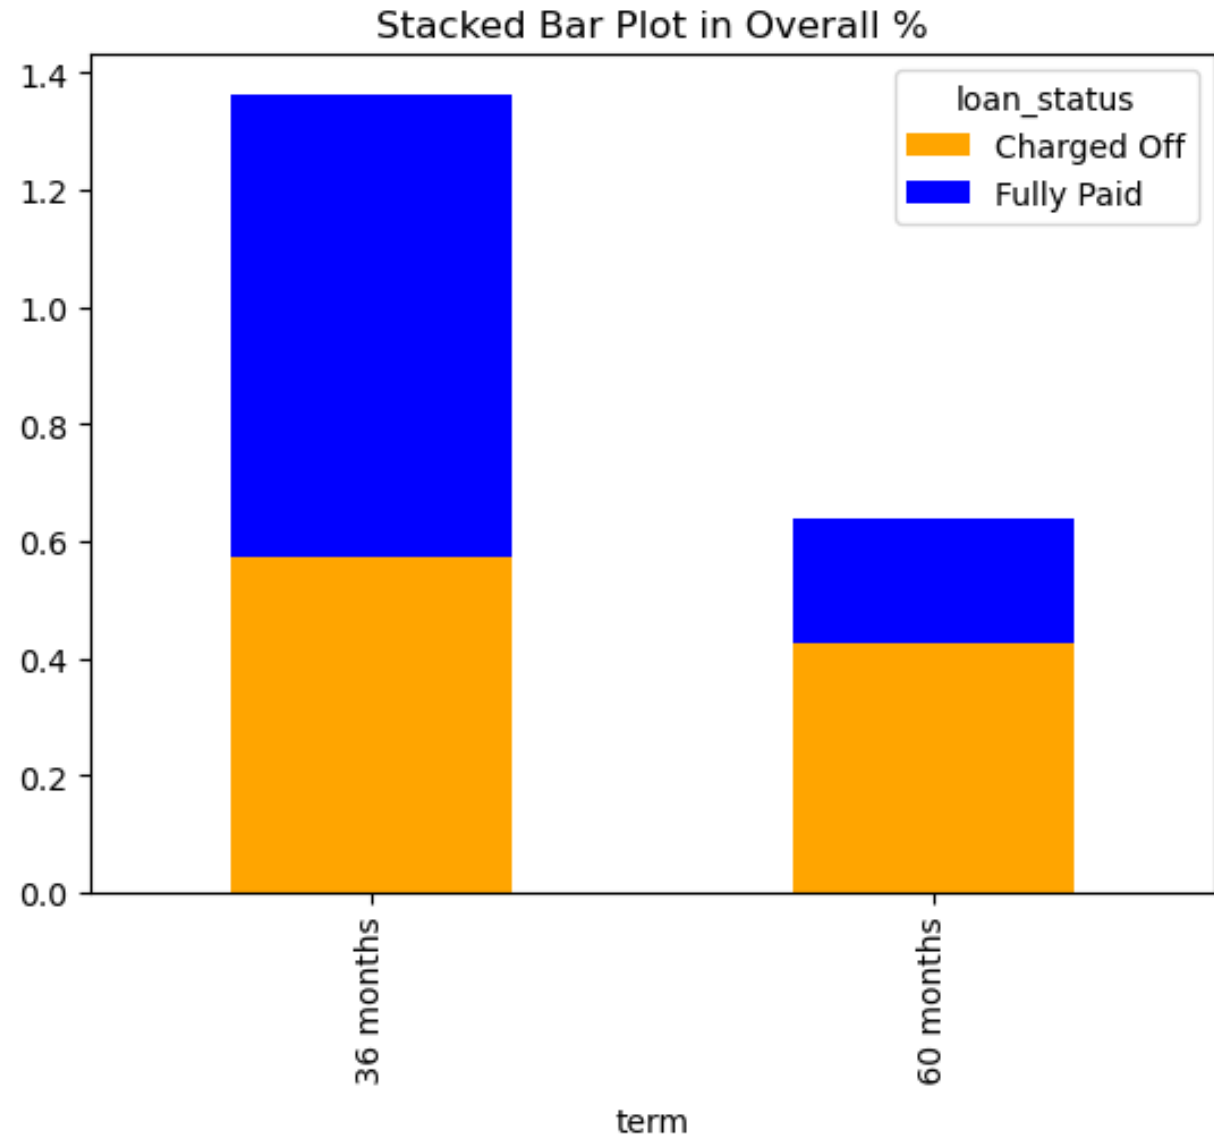

Bivariate Analysis

Term vs Loan Status

Observation:

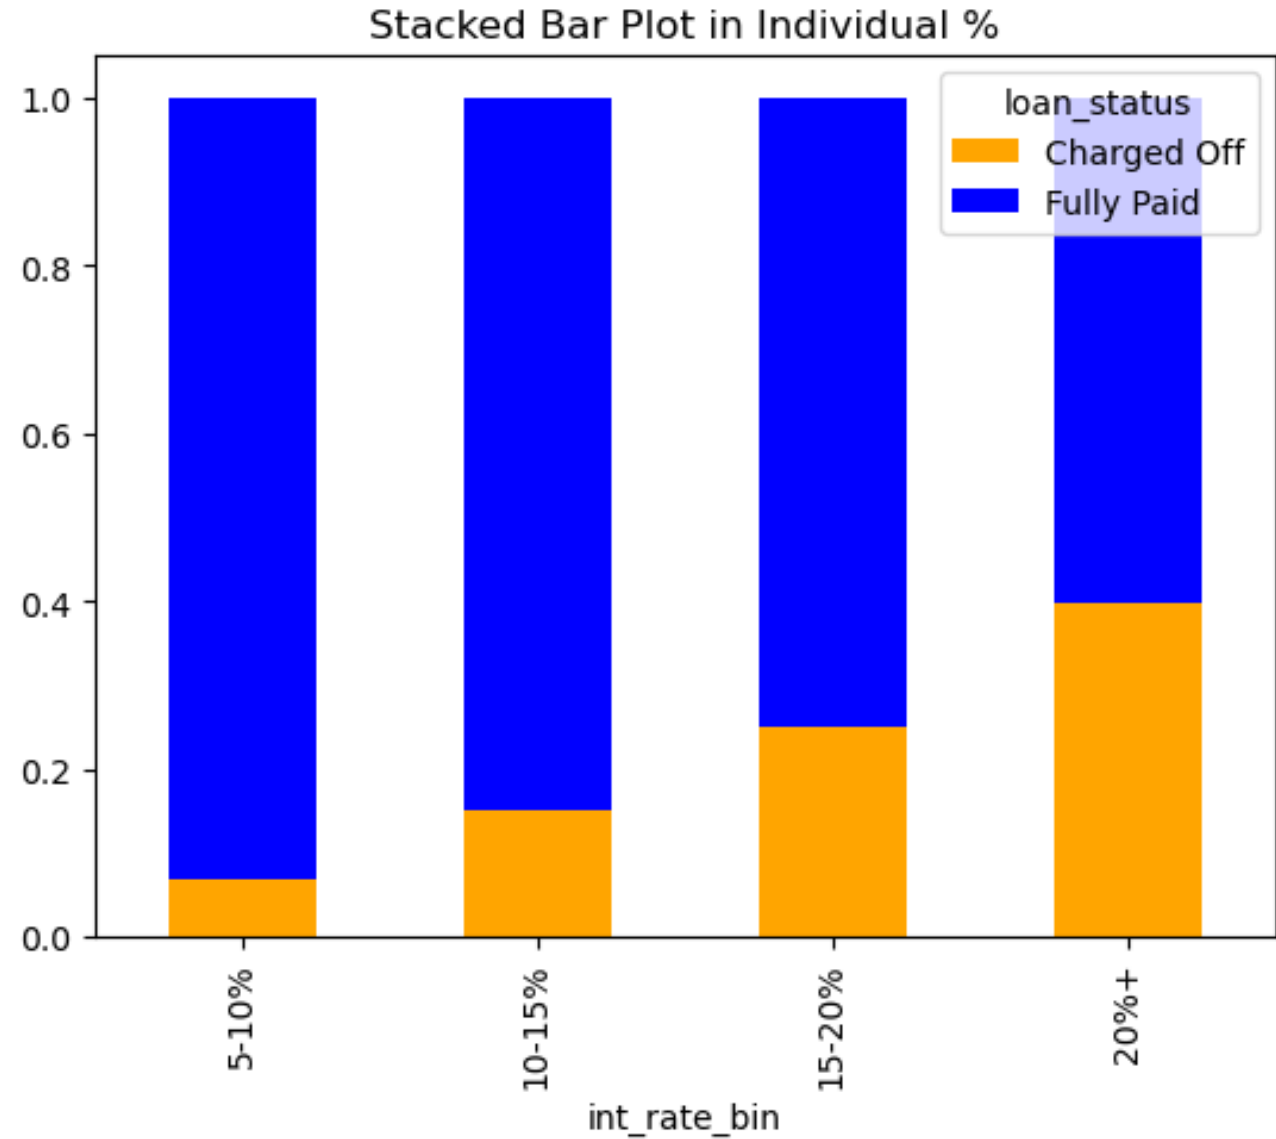

- Borrowers with 60 months term loan are more likely to default.

Interest rate vs Loan Status

Observation:

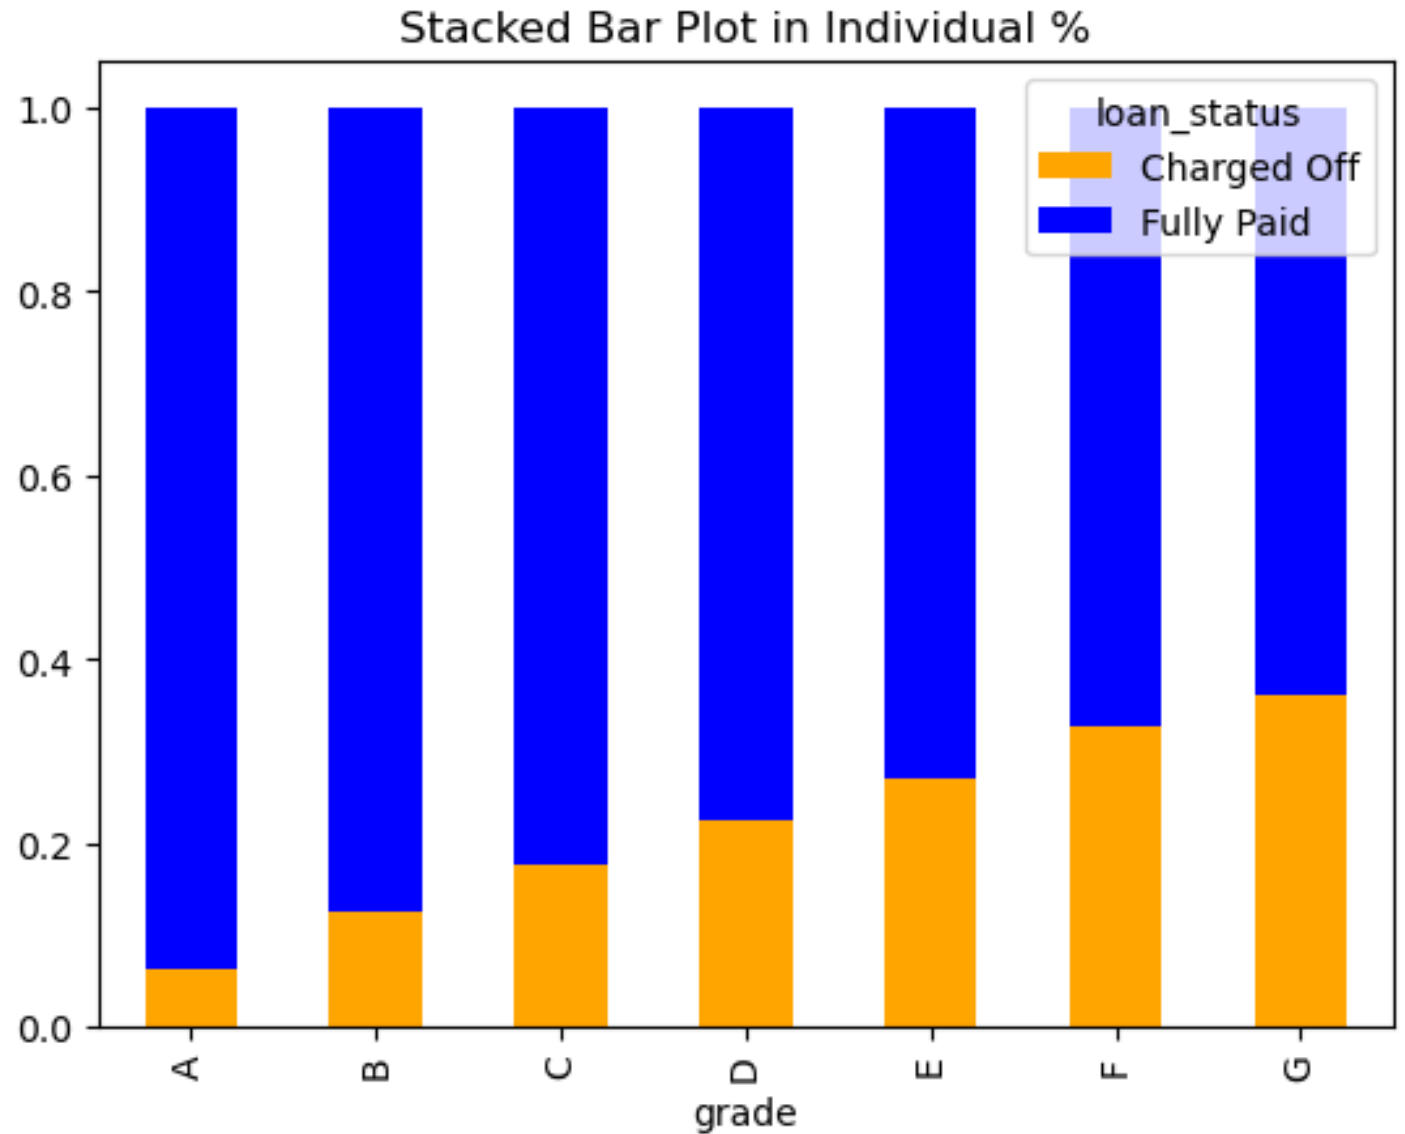

- Borrowers with 20%+ interest rate are more likely to default.

Grade vs Loan Status

Observation:

- Borrowers with lower grade are more likely to default.

Sub Grade vs Loan Status

Observation:

- Borrowers with sub grades of F5, G3 & G5 are more likely to default.

Purpose vs Loan Status

Observation:

- Borrowers with purpose of below items are more likely to default.
 - Debt Consolidation
 - Credit Card
 - Small Business
 - Others

Interest Rate vs Loan Status

Observation:

- Borrowers with higher interest rate are more likely to default.

Observation:

- Borrowers from California are more likely to default.

- Borrowers from California are more likely to default.

- Borrowers from California are more likely to default.

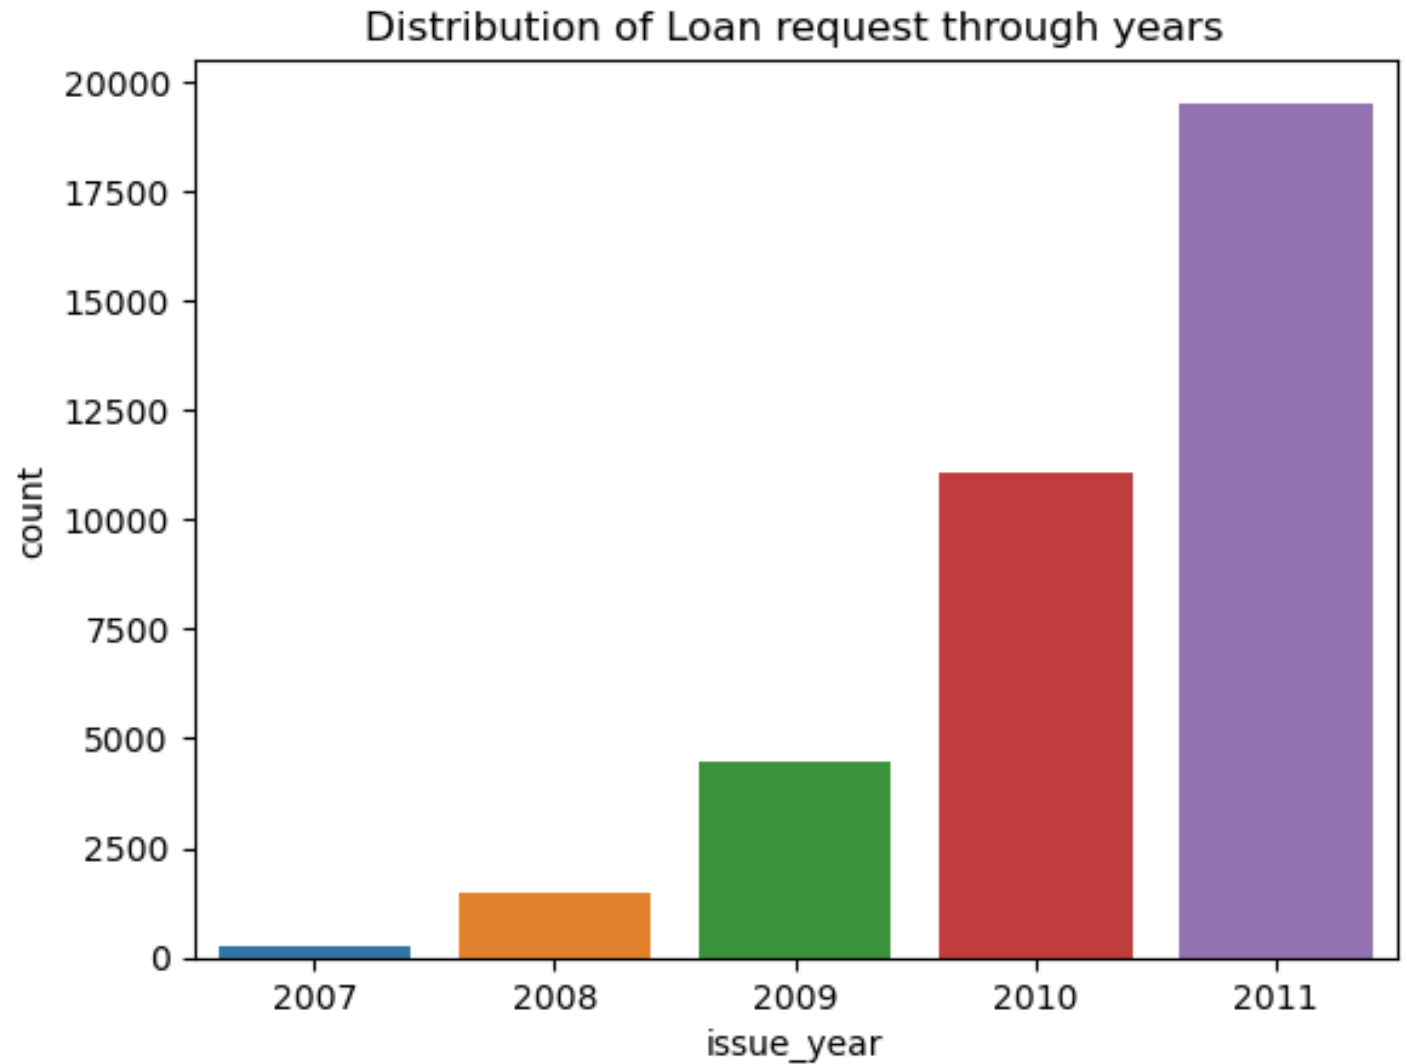

Derived Metrics

Loan request in year vs frequency

Observation:

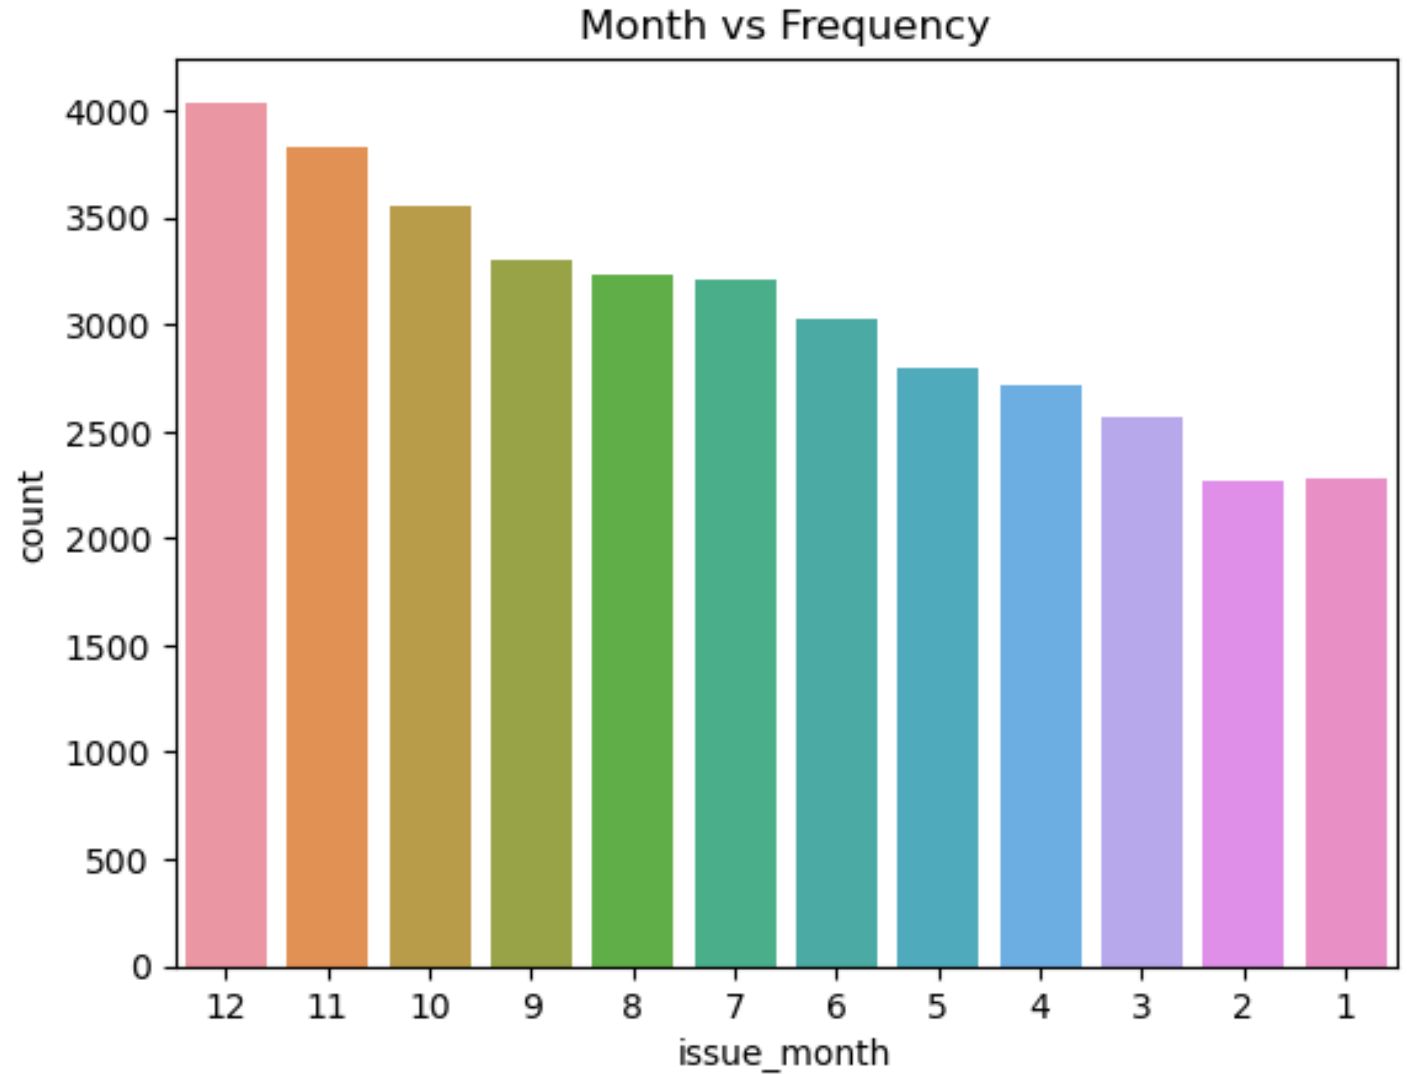

- With every passing year number of customer increased
- Lending club's business is in bullish trend.

Months vs Frequency

Observation:

- With each passing months in a year number of loans approved are increasing.

Multivariate Analysis

Term vs Purpose Defaulter

Observation:

- Borrower applying with purpose of debt consolidation and 36 month low tenure are highly defaulting.

Interest rate vs Annual Income vs Verification Status

Observation:

- Borrower with income less than 50K and applying for loan with interest rate 10% to 15% are more likely to default if not verified.

Correlation Matrix

Observation:

- Annual Income is inversely correlated with DTI (Debt to Income Ratio)
- Loan Amount, Funded Amount & Funded Amount by Investor are highly correlated.

Consolidated Observations & Conclusion

Statistically, borrowers with 36 months tenure loans are more likely to default than 60 months

Our assumption is that A is highest grade and G is the lowest. Borrowers with lower grade are more likely to default.

Loans with purpose of debt consolidation, credit card , small business and others are more likely to default.

Low Income borrowers (<50K) are more likely to default.

Every year with each passing month number of borrowers increases.

Indicators for defaulting

Borrowers with 36 months Tenure

Borrowers with annual income less than 50K

Borrowers with interest rate more than 10%

Borrowers with purpose of debt consolidation, credit card, small business and others.

Borrowers with 10+ years of experience

Borrowers with <3 years of experience

Borrowers with lower grade

Recommendations

- Lending Club must not approve loan with **purpose of others**.
- Borrowers with higher interest rate calculated must be verified completely.
- Lending club should reduce the interest rate for borrowers with income less than 50K.
- Lending Club should avoid borrowers with higher DTI (Debt to Income Ratio).
- Minimize number of loans approval towards requests with debt consolidation purpose.
- Lending Club can promote 60 Months loan over 36 Month to enable borrowers with low installment amounts.
